

Hi-Trac II Traction Bar and Air Glide Traction Section Conversions

Profero offers two options to remove rollers from your traction section.

First option – Traction Bars eliminate the upper rollers. Traction Bars can operate on top of most existing lower rollers.

Second option – Replace both the upper and lower rollers with Air Glide Conversion replacing bottom (lower) rollers with Air Boxes.

Benefits:

Cost-effective upgrade for existing double facers.

Permits the reduction of a traction section to 10ft. (3m).

Easy to install.

Suitable for all existing double facers.

Eliminate part (Traction Bars) or all (Air Glide) of the roll and bearing maintenance.

Air Glide air box system reduces drag on the main drive unit.

Eliminates any possibility of board crush in the Traction Section.
